

## Profile of Partners Project NADIA

### Noise Abatement Demonstrative and Innovative Actions and information to the public

*Life 09 ENV IT 000102*

Provincia di Genova

#### Province of Genoa ([www.provincia.genova.it](http://www.provincia.genova.it))

In consideration of multidisciplinary aspects of NADIA project and the coordinating role, the Province of Genoa has created an integrated working group, open to subsequent contributions, which includes two main technical expertise in the areas of noise (**Office of Energy and Noise**) and road network (**Service Road and Hydraulic Engineering and Maintenance**). The working group is also integrated with expertise in construction (**Construction Services**) and financial (**Financial Services**) aspects.

The acoustic aspects, in the Province of Genoa are followed by the Office of Energy and Noise: the Office came into full operation in 1997, picking up the legacy of previous initiatives of the Province, already active on the issue of environmental noise since 1993. The Office is in charge for the following activities: monitoring environmental noise, the approval of noise local mapping and action plans, studies on noise in specific situations (such as road noise, ports, etc. ...) Since 1994, noise measurements were carried out in over 1500 measurement points, in various parts of the province: urban areas, highways and main roads, port areas, industrial areas, villages and areas inhabited rural areas and in urban park natural environments, schools and other sensitive sites.

Part of the technical reports on activities and other material is available at [www.sportellorumoreambientale.it](http://www.sportellorumoreambientale.it).
