Noise Abatement Demonstrative and Innovative Actions and information to the public

Life 09 ENV IT 000102

Province of Savona (www.provincia.savona.it)

In the Province of Savona the office in charge of noise is part of the **Service for Energy and Environment** that is part of the Sector "**Protection of Natural Resources and Environment**". The legislation assigns responsibilities to the Province in noise management from both an administrative point of view and from a standpoint of control and in particular:

- Approving zoning/variants/municipal action plans
- Impact Assessment reports/acoustic climate, with particular reference to the IPPC
- Support to municipalities (e.g. training)
- Control functions in case of problems at over-municipal scale.

To address these needs, the Province of Savona has acquired expertise and have been developed over the years, various activities such as:

- Study of traffic flows (both units via air quality is through field studies)
- Work on rehabilitation of provincial roads (roundabouts, sound-absorbing asphalt, traffic restrictions)
- Noise mapping of roads

At present the focus is in the updating of the noise mapping of roads aimed at verifying the need of recovery actions, primarily on receptors, so-called "sensitive" (hospitals, nursing homes, schools).
